

Verusen reduces materials and inventory costs by millions of dollars annually while improving materials availability for the world's most demanding supply chains. Read about our customers' success below.

Case Study

Fortune 500 Consumer Goods Company

One of the world's leading manufacturers and marketers of tissue, pulp, paper, packaging, building products and related chemicals.

\$580MM INDIRECT MATERIALS

120+ PLANTS, 7 DIVISIONS

30,000+ EMPLOYEES

Fortune 500 Consumer Goods Company

The Challenge

Spent significant time developing dashboard to analyze inventory turns, parts locations, obsolescence, etc, and had put tremendous effort into data quality. Still, they were unable to achieve much in the way of results with this approach. Specifically, they carried an excessive and growing amount of MRO inventory that is not necessarily the right inventory.

There was a staff of 5 working for the Procurement execs who were tasked with driving inventory reduction strategy. The problem was, they were spending the bulk of their time gathering and managing data for analysis, and by the time they had insights they were untimely and insufficient for decision making.

60%+ of team's time was spent just gathering data from their multiple sources.

As a result, their rear-facing analysis produced very little data-driven change.

The Vision

Optimize asset strategies, inventory stock levels, and the MRO supply chain to ensure the right inventory is available at the right time with facility reliability at the lowest total cost of ownership.

The Result

Verusen brought forward capabilities related to data analytics, artificial intelligence, and visualization.

Their cloud architecture made it simple, not only to gain wide adoption, but also aggregate multiple SAP/EAM systems simultaneously, unifying Supply Ops, Procurement, and Finance strategies.
