Identified savings opportunities in **< 45 days**

\$20M

Verified savings opportunities in **< 90 days**

50%

Working capital reduction in **< 1 year**

100%

Capability to audit all material inventories

Our Client

Fortune 500 energy company that provides gas and electric services to residential and commercial properties

Key Business Needs

- Experienced significant growth through **M&A activity**, resulting in a **lack of visibility** into materials inventory.
- Unable to optimize inventory and eliminate excess working capital, they needed a solution that combines data and inventory optimization into a **single platform**.

Business Challenge

- Consolidate business unit data
- Ability to audit part inventory reviews
- Harmonize & structure data
- Analyze historical data
- Enable actionable insights

Solution

Bypassing a lengthy and costly data harmonization project, Verusen quickly provided a **single view of inventory** across all business units.

This unified view helped the organization to better achieve and optimize the **economies of scale** desired from their **M&A growth strategy**, identifying over \$40M in savings opportunity.
